

Above, a person from Francis Street wanted to walk to a bar and meet their friend from UCD who was driving. The returned result they chose was Alfie Byrne's.

Here we see a student in DCU walking and a student in St. Patricks College cycling. This shows that the meeting place locality does not have to be between the two points.

This test shows the user searching for a restaurant that a person on **Henry street** and a person in **Trinity College** could walk to in an equal time.
